## DRIESCHER -

## Indoor Switches for

 Railway lines- 1-pole design
- Nominal voltage up to 27.5 kV
- Rated current up to 4000 A

## ELEKTROTECHNISCHE WERKE FRITZ DRIESCHER \& SÖHNE GMBH

# DRIESCHER - Indoor switches for railway lines 

according to EN 50152-2

1-pole indoor switch-disconnector H 27-1B; Un 15 kV
1-pole indoor switch-disconnector H 29-1B; Un 15 kV
1-pole indoor switch-disconnector H 22-1B; Un 27.5 kV
1-pole indoor disconnector L 31; Un 15 kV, 630 A
1-pole indoor disconnector L 31; Un 15 kV, 1600 A
1-pole indoor disconnector L 31; Un 27,5 kV, 630 A and 1250 A
1-pole indoor disconnector L 31; Un $27,5 \mathrm{kV}, 1600 \mathrm{~A}$ and 2500 A
1-pole indoor disconnector with earthing switch L 31; Un $15 \mathrm{kV}, 1600 \mathrm{~A}$
1-pole indoor slid-disconnector L 31; Un 15 kV, 630 A
1-pole indoor slid-disconnector L 31; Un 15 kV, 1600 A
1-pole indoor earthingswitch L 31; Un 15 kV
1-pole indoor earthingswitch L 31; Un 27.5 kV
Fuse-holders L 31; Un 27.5 kV , High-voltage high-breaking-capacity fuses 24 kV and 36 kV Stroke limitation pads

## General

These Driescher indoor switching devices are specifically designed for railway applications.
They are in compliance with the specifications according to EN 50152-2.
The 1-pole switches can be used for a rated voltage
range of 15 kV to 27.5 kV , depending on the respective design, and for a rated current range of 400 A to 4000 A.
References: 25 kV Madrid-Sevilla; 27,5 kV HarbinDalian, China

## Operating conditions

The equipment can be installed in places at an altitude of up to 1000 meters above sea level. At an altitude above 1000 meters the rated insulation level of the switchgear must be adjusted accordingly. The switchgears are designed for use under normal operating conditions in compliance with EN 62271-1.

According to this specification the following limit values apply: Ambient temperature:

| Max. value : | $+40^{\circ} \mathrm{C}$ |
| :--- | :--- |
| Max. value of $24-\mathrm{h}$ average | $+35^{\circ} \mathrm{C}$ |
| Min. value (corresponding to class | $-40^{\circ} \mathrm{C}$ |
| "Minus 40 outdoors") |  |

## Technical description

## Allgemein

These Driescher indoor switches are specially designed for railway applications. They meet the specifications according to the EN 50152-2.
The 1-pole switches are designed for a rated voltage range from 15 kV to 27.5 kV and a rated current range of 400 A to 4000 A .

## Fittings

The switch disconnectors are basically fitted with a stored energy mechanism for rapid making and braking. The current carrying components are made of electrolytic copper with electro-silver plating in compliance with QTL 0200. All steel parts have been given an electro-plated coating which provides excellent corrosion resistance. Every switch is provided with an earthing screw.

## DRIESCHER - Indoor switches for railway lines

## 1-pole indoor fuse-holders L 31; Un 27.5 kV

1-pol. indoor fuse-holders with nominal voltage 27.5 kV .
Rated current 200 A to collet high-voltage high-breaking-capacity fuses for shunt switch heating systems.

High-voltage high-Breaking-capacity fuses

Type H 221 Sta (with striker pin)
Rated voltage: 24 and 36 kV
Rated current: up to 200 A
All types of our h.v.h.b.c. fuses are made with porcelain tubes which are glazed brown for use indoors and outdoors.
see brochure 791

## Stroke limitation pads, 7 t or 10 t • Drawing no. AB2-25 281

## Purpose of strike limitation pads

Because of frequent short circuits in contact-line networks, windings in main transforming stations are during operation exposed to extraordinary mechanical stress. That stress is taken into account even when transformers are being built by using extremely strong clamping structures and high winding pressures. Since, however, windings will, despite preparatory treatment, set during isolation through compression of
hollow spaces, the arrangement for the past few years has been that all new transformers will, after an operating time of approximately 3 hours, be re-compressed at the manufacturer's plant.
This re-compressing has proved a success but causes high cost (trans-former installation and removal, transport, wage costs or replacement transformer).

The Bundesbahn Central Office has therefore developed a stroke-limitation pad (the "HB pad") which in future will render redundant the re-compressing of transformers equipped with such pads.
The HB pad (drawing number, 2 Ekk 702.6.12.82.851.00) will be installed instead of the clamping screws which have until now been customary.
The task of the HB pad is to transfer the winding pressure from the clamping bolt via the winding's thrust collar to the winding and to compensate for the shortening of the winding which is caused by setting and high-impact short circuits, and thus to maintain the length of the winding.
